Care and Maintenance

- After completing assembly, check that all bolts and screws are secure and tight. Hardware can become loose over time, so it is your responsibility to periodically check the tightness of all fasteners for as long as you use the crib.
- Wood is a natural material. As such, it can be affected by changes in temperature and humidity. Extreme changes in humidity and temperature can cause the wood to warp, swell, crack, or shrink, thus compromising the structural integrity of the crib and making it dangerous to use.
- Use caution when placing the crib in storage to avoid extremes in temperature or humidity. Cribs should always be stored indoors in climate controlled, dry locations.
- Use care when using a vaporizer or humidifier around the crib. Do not aim the vapor at the crib or any other wooden furniture in the nursery. Avoid using vaporizers or humidifiers for extended periods of time.
- To clean the crib, wipe with a damp cloth and immediately dry the surface. Do not use any chemical cleaners or polishes. Such products can leave a residue on the finish and come in contact with your child.
- Your crib has a durable and protective non-toxic finish. However, if you decide to refinish it, you must use a non-toxic finish specified for children's products. Do not use any toxic
